DETAILED ACTION

This office action is in response to the amendment filed 2/17/10. Claims 1 – 3, 6 – 8 and 19 - 24 have been amended. Claims 4, 5 and 9 – 18 have been cancelled. Claims 1 – 3, 6 – 8 and 19 - 24 are now pending.

REASONS FOR ALLOWANCE

Claims 1 – 3, 6 – 8 and 19 - 24 are allowed.

The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references of Nosker et al (US 5,789,477) in view of Marinelli (US 6,247,651).

Applicant claims:

A modular thermoplastic ~~plastic~~ structural member comprising a web section disposed along a horizontal axis and one or more flange sections disposed along a horizontal axis parallel thereto and integrally molded to engage the top or bottom surface of said web section, wherein:

the width of said flange sections measured perpendicular to said horizontal axis of said flange section is two to ten times the width of said web section measured perpendicular to said horizontal axis of said web section;

the vertical dimension (thickness) of said flange sections are about one-tenth to about one-half the size of the vertical dimension of said web section without any flange sections;

and ~~further wherein~~ said structural member is formed from a co-continuous immiscible polymer blend consisting essentially of:

a high density polyolefin and

a thermoplastic polymer-coated fiber material or a thermoplastic polymer having fiber material embedded therein.

Nosker discloses a structural composite formed from a mixture of high density polyolefin and a thermoplastic-coated fiber material useful in high stress applications such as railroad ties, dimensional lumber, poles, guard rail posts, pier, boardwalk, etc. Nosker further discloses a railroad tie produced with dimensions of 7"X9"X10', which is the typical dimensions of a tie, but is silent on the specifics of the tie, namely the dimension and spatial orientation of flange and web sections.

Marinelli discloses a composite railway tie. The composite is made of HDPE, rubber tires and fiberglass. The tie is made in the form of an I-beam with flange sections with an interconnecting web section.

No prior art teaches or fairly suggests the claimed modular thermoplastic structural member formed from a co-continuous polymer blend consisting essentially of a high density polyolefin and a thermoplastic polymer-coated fiber material wherein the structural member comprises a flange sections integrally molded to engage the top and bottom surface of a web section, wherein the width of the flange sections measured perpendicular to the horizontal axis of said flange sections is two to ten times the width of the web section measured perpendicular to the horizontal axis of said web section and wherein the thickness of the flange sections are about one-tenth to about one-half the size of the web section without any flange sections.

Marinelli's composition, which includes rubber, has a lower modulus of elasticity compared to the claimed invention and cannot handle high loads without deforming. Nosker's structural member lacks the specific dimensions and spatial arrangement of web and flange sections that give said structural member the required design that allows for high loads. Applicant further demonstrated a video of a combat tank successfully crossing a bridge made with the composite and structure claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRANCES TISCHLER whose telephone number is (571)270-5458. The examiner can normally be reached on Monday-Friday 7:30AM - 5:00 PM; off every other Friday.
